## A Made To Measure Pool!

Creating a deluxe pool for a restricted space can be challenging yet nothing has been lost in this SPATA award winning pool which was designed by London Swimming Pool Company and built in the narrow basement of a luxury London townhouse.

The 9m x 3m and 1.7m deep pool is finished in iridescent deep blue Casa Dolce Chroma Eucalipto mosaic tiles; and bespoke honed quartz silver natural stone tiles are set around the pool, creating a touch of glamour and personalisation for the minimalist design.

The walls of the pool hall are finished in complementary silver quartz strip cladding by Island Stone. A transparent glass wall runs the length of the room leading to the pool hall entrance. This and the window at one end of the pool create a feeling of a much larger space. Downlighters, ceiling and wall strip lights reflect in the deep blue pool, complementing the Wibre underwater pool lighting. These design elements combine to create a warm and inviting ambience, just what the client wanted.

The pool plantroom is equipped with state-of-the-art plant including an AstralPool Viron cartridge filter, a Badu pump and environmental control is performed by a Phoenix 500 Super Plus air handling unit.

Water treatment is provided by a Bayrol Pool Manager oxygen dosing system and a Rainbow offline chlorine feeder.
